

Fulbright-Nehru Fellowship Opportunities for US citizens

For American citizens, these are exciting times to come to India on a Fulbright-Nehru grant. Within the last two decades, India has emerged as a major knowledge-based economic power. Today, the country possesses one of the largest human resource treasures in almost all frontiers of education. Its universities and institutes of higher education have attained global recognition as a result of their significant contribution in research and development in many disciplines ranging from the arts and humanities to biotechnology, nanotechnology and genetic engineering. Fulbright-Nehru awards to India provide unique opportunities for US students, faculty and professionals to see an ancient civilization emerge as one of the world's major economic and industrial forces.

USIEF offers a wide range of study abroad opportunities to US citizens in four main categories:

- ♦ **Lecturing and Teaching Awards for US faculty and school teachers**
- ♦ **Faculty and Professional Research Awards**
- ♦ **Student Awards to pursue post-graduate and doctoral research in India or to teach English as a second language in Indian middle and secondary schools**
- ♦ **Professional Development Programs for leadership and skill development**

Details about the grants, benefits and application procedures for **student grants** can be found at <http://us.fulbrightonline.org/home.html>, while information about **grants for scholars and professionals** can be found at www.cies.org.

New Opportunities Available for US Scholars

India now has the largest US Fulbright Scholar Program in the world with over 80 US scholar awards annually. Applications are welcome across disciplines from all qualified faculty, researchers and professionals including scholars in the early stages of their careers.

USIEF has recently introduced **research/teaching combo grants**. In addition, we have initiated “**serial grants**”, which will allow faculty the opportunity to conduct research in India over short periods of time over the course of two years without necessarily taking sabbatical leave.

We are also pleased to announce that USIEF provides a **dependent education allowance up to \$10,000**. Please visit www.cies.org for details of all of these grant options and benefits.

Institutional Partnerships

Lately, many US institutions have sent delegations to India on fact finding missions as they seek to engage strategically with their counterparts in India. A Fulbright-Nehru grant is an excellent way to seed potential long-standing partnerships with Indian institutions. In fact, each year we have grantees whose research collaborations and other joint efforts lead to active engagement at an institutional level.

Please do not hesitate to contact us if you have any questions about our Fellowship opportunities. We hope to welcome you and your colleagues to India someday soon.
